Prof. Dr. Thiago Barros (UFRGS, Brazil)

## Editorial

Open Minds International Journal (OMIJ) is the Electronic Magazine of Editora Mentis Abertas that is part of a plural and international collective, formed by professionals from different areas with the aim of supporting the development of people/researchers through interdisciplinary publications through research, teaching and academic and scientific exchange activities. This new issue of OMIJ begins a new phase that Brazilian magazines are going through, marked by efforts to respond to demands from the editorial field, funding agencies and periodical evaluation.

Last year, we had a dense debate in events and publications, in which the academic field was able to express itself on issues involving professionalization, financial support, internationalization and evaluation of journals in the country, such as payment of fees for publication, adoption of open access, publication in English, among other measures.

Magazines have played a fundamental role in the professional world, providing relevant and updated information on different sectors and areas of knowledge. With a professional tone of voice, these publications become reliable sources of knowledge and inspiration for professionals in all areas.

Furthermore, scientific journals are a platform for exchanging ideas and networking. They provide a space for professionals to share their opinions, perspectives and findings, allowing other professionals to benefit from this information. Through articles, interviews and reviews, magazines provide a conducive environment for developing professional connections and partnerships.

Therefore, it is essential that professionals value and take advantage of magazines as a tool for their professional development and growth. By investing time in reading and studying these publications, professionals can stay updated, inspired and connected, increasing their chances of success in their respective fields. By valuing these publications as reliable sources of knowledge, professionals can benefit from their numerous advantages, expanding their horizons and achieving their professional goals. Therefore, it is essential that professionals make the most of the potential of magazines as tools for their professional growth and development.

We hope that the issue will be of good use to readers and that we can continue to fulfill our mission satisfactorily, with the same disposition and seriousness since its creation.

Appreciate, absorb and disseminate information. Happy reading!
